

IIoT ROI & Business Case

Generated June 12, 2026

YOUR INPUTS

Unplanned Downtime (hrs/yr)	240
Current OEE	68%
OEE Improvement Target	+8%
Hourly Production Value	\$4,500
Platform Cost	\$280,000
Implementation Timeline	6 mo
Annual Operating Cost	\$42,000

CALCULATED RESULTS

Annual Cost Reduction	\$4.23M
OEE Impact Value (per year)	\$3.15M
Payback Period	7 mo
3-Year Net Benefit	\$10.18M

METHODOLOGY

Annual cost reduction = (downtime hours x hourly production value) + (OEE improvement % x 8,760 production hours x hourly production value). Payback period = platform cost / monthly net savings, starting after implementation completes. 3-year net benefit = (annual savings x 3) minus platform cost minus (annual operating cost x 3), with savings prorated in the implementation year. All figures are estimates. Actual results depend on asset mix, shift patterns, and deployment scope.
